Top 10 Categories on YouTube Trending (US)

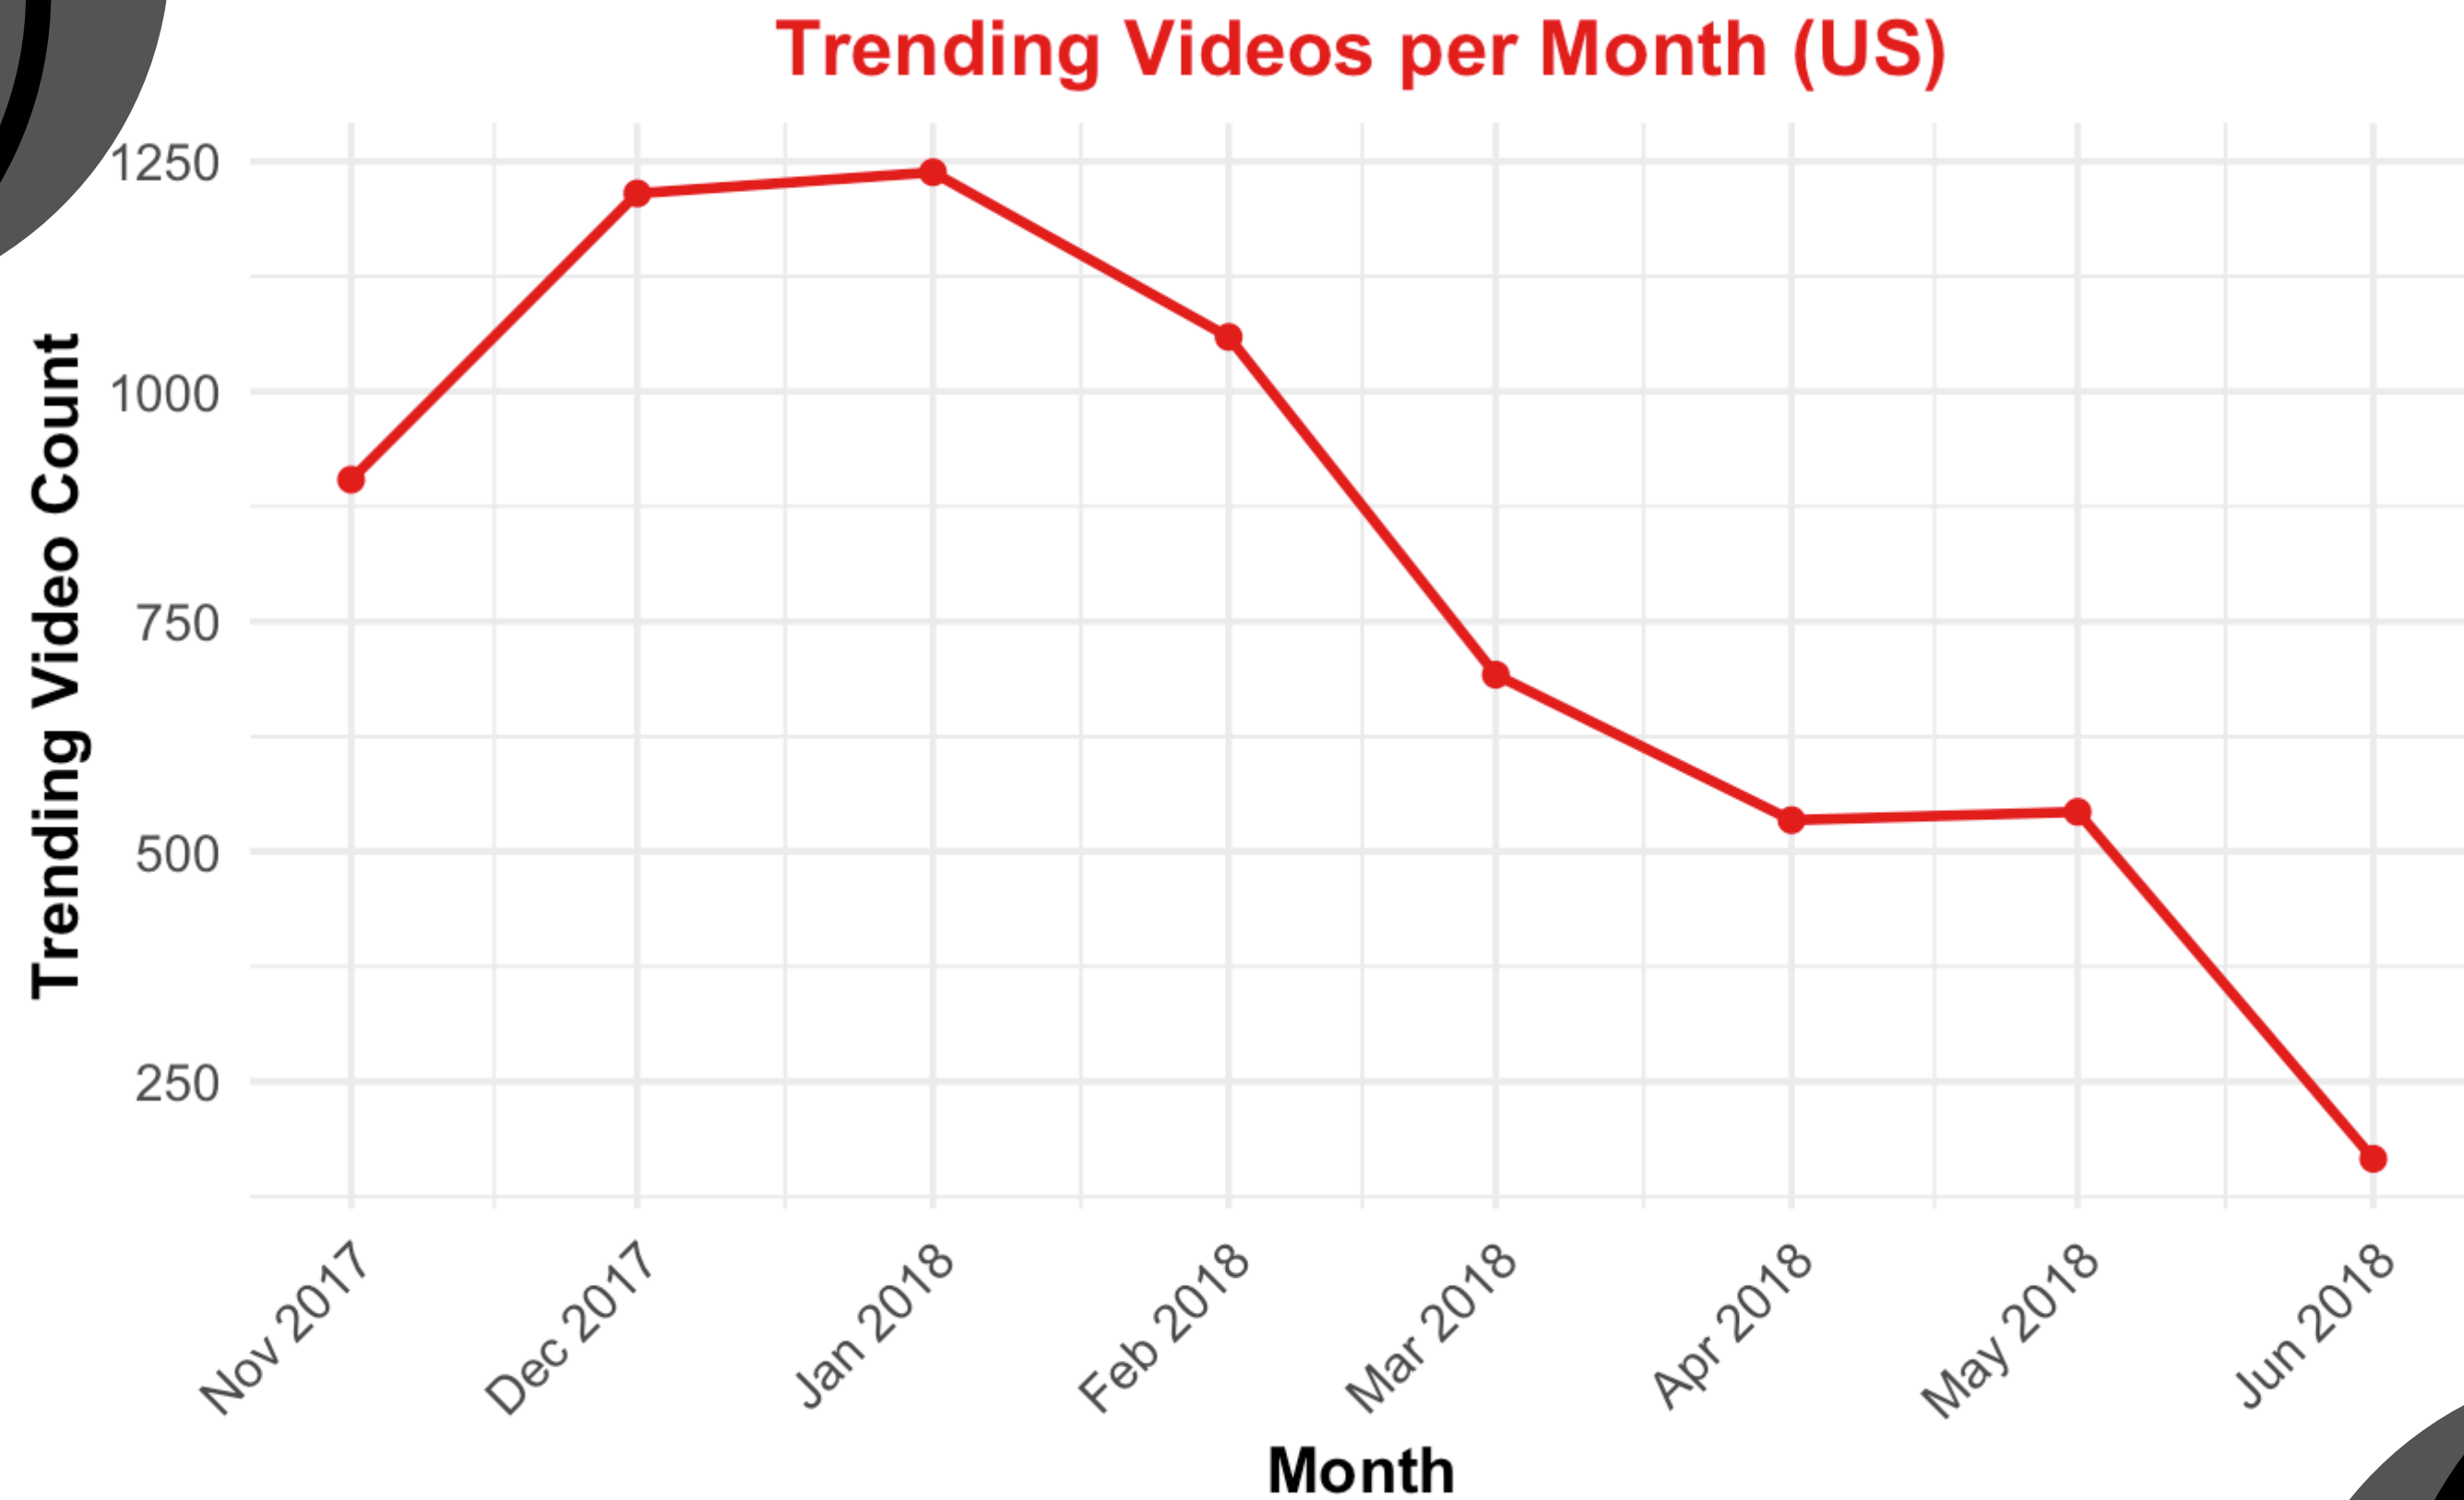

This chart shows which content categories appeared most often on YouTube's trending page. We can see that entertainment-focused videos dominate the platform.

Top 15 Channels on YouTube Trending (US)

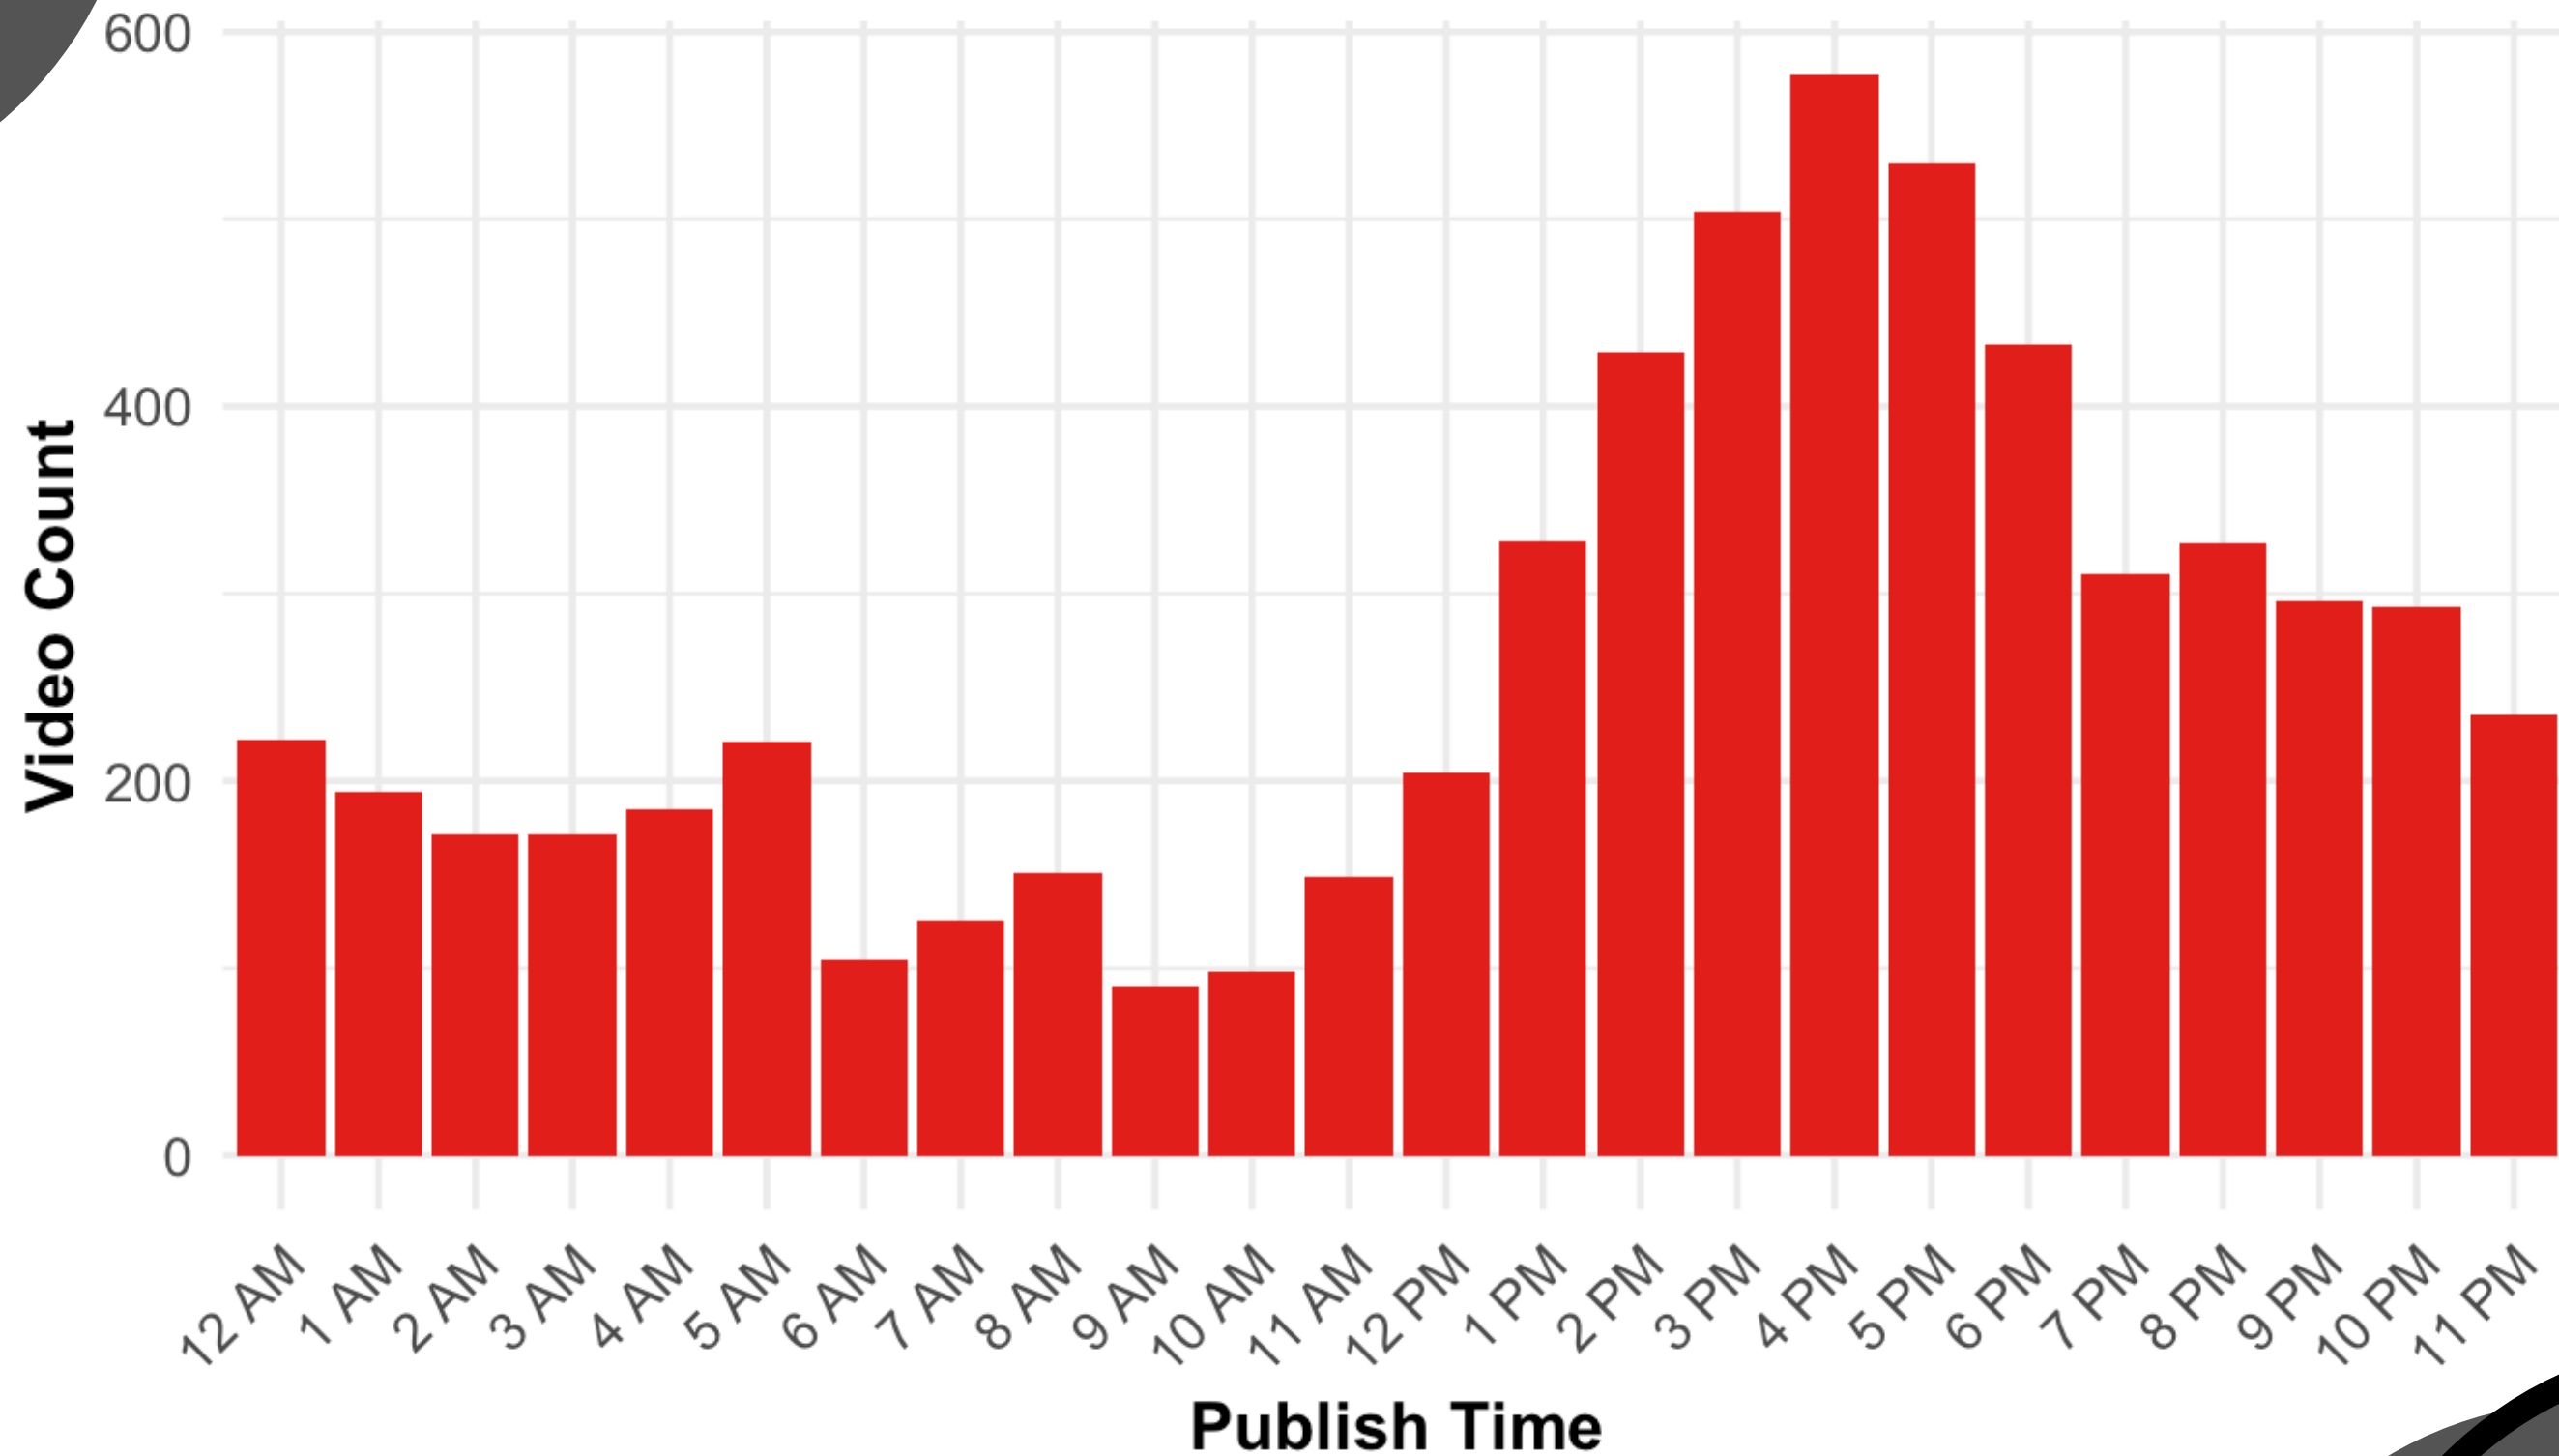

Here we look at which creators appear most frequently. The graph shows that a small number of large channels drive most trending activity.

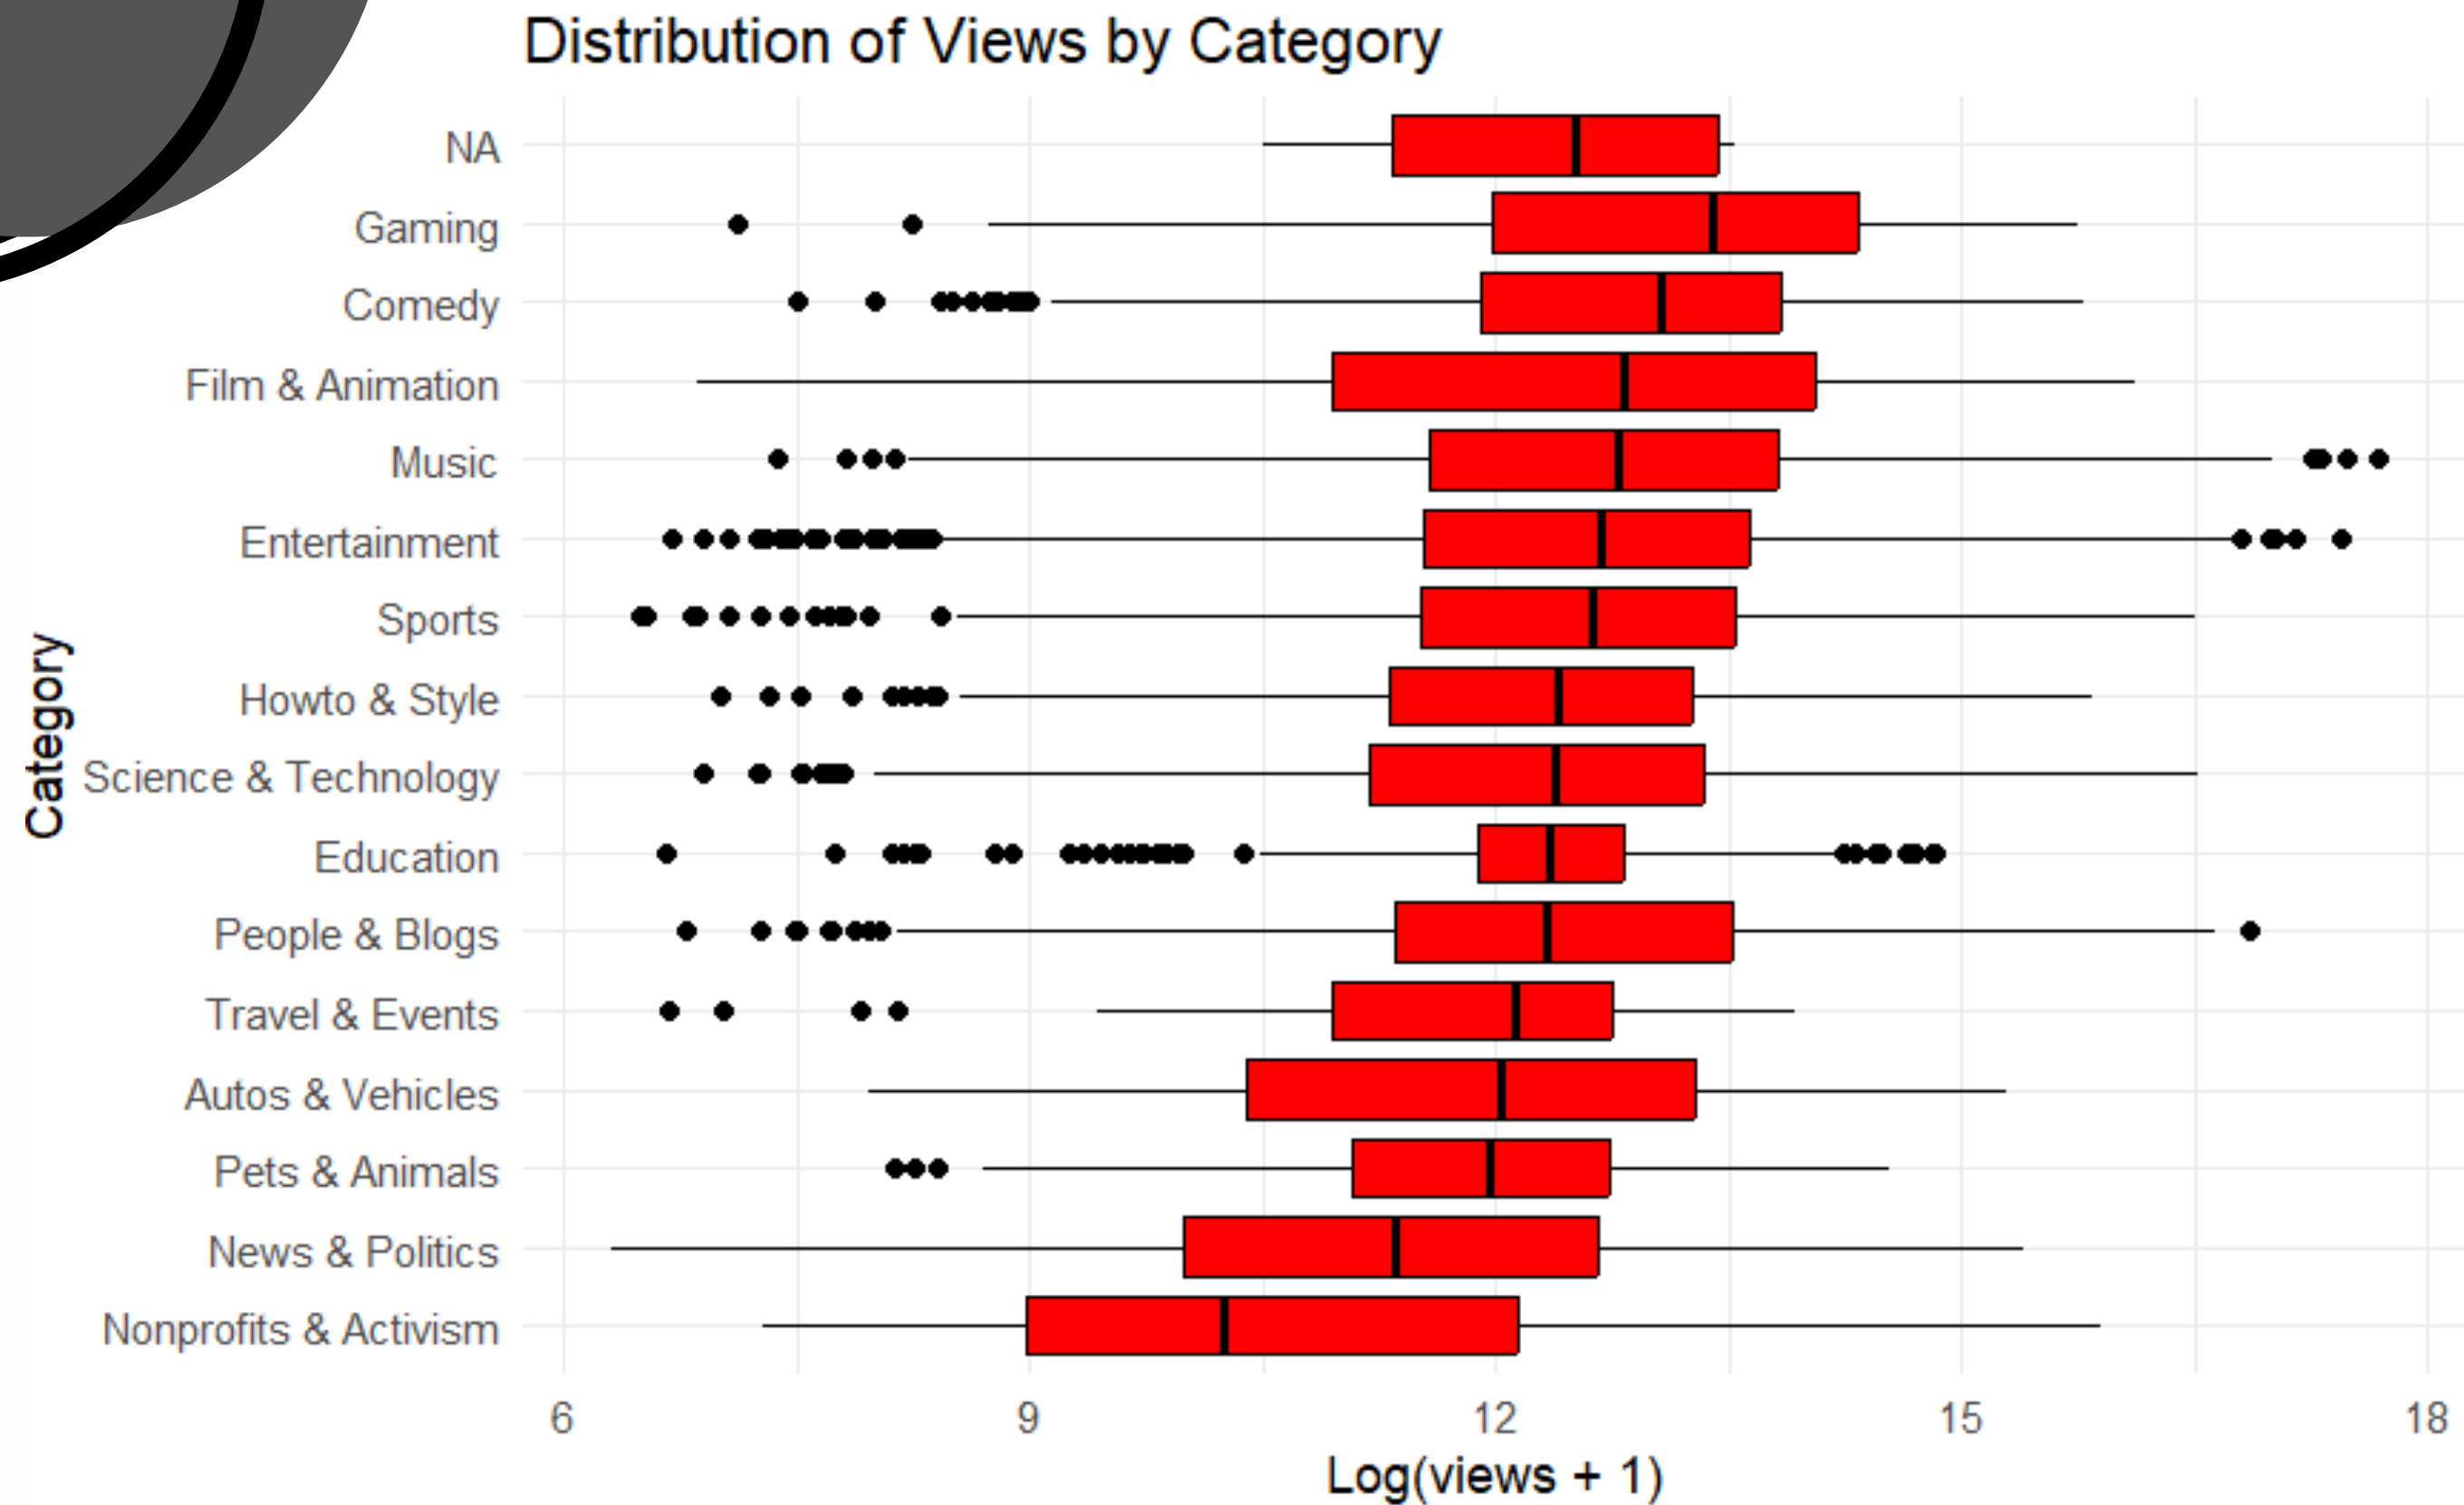

This visualization displays how trending volume changes over time. The number of trending videos fluctuates across months instead of remaining constant.

When Creators Publish Trending Videos (Hour of Day)

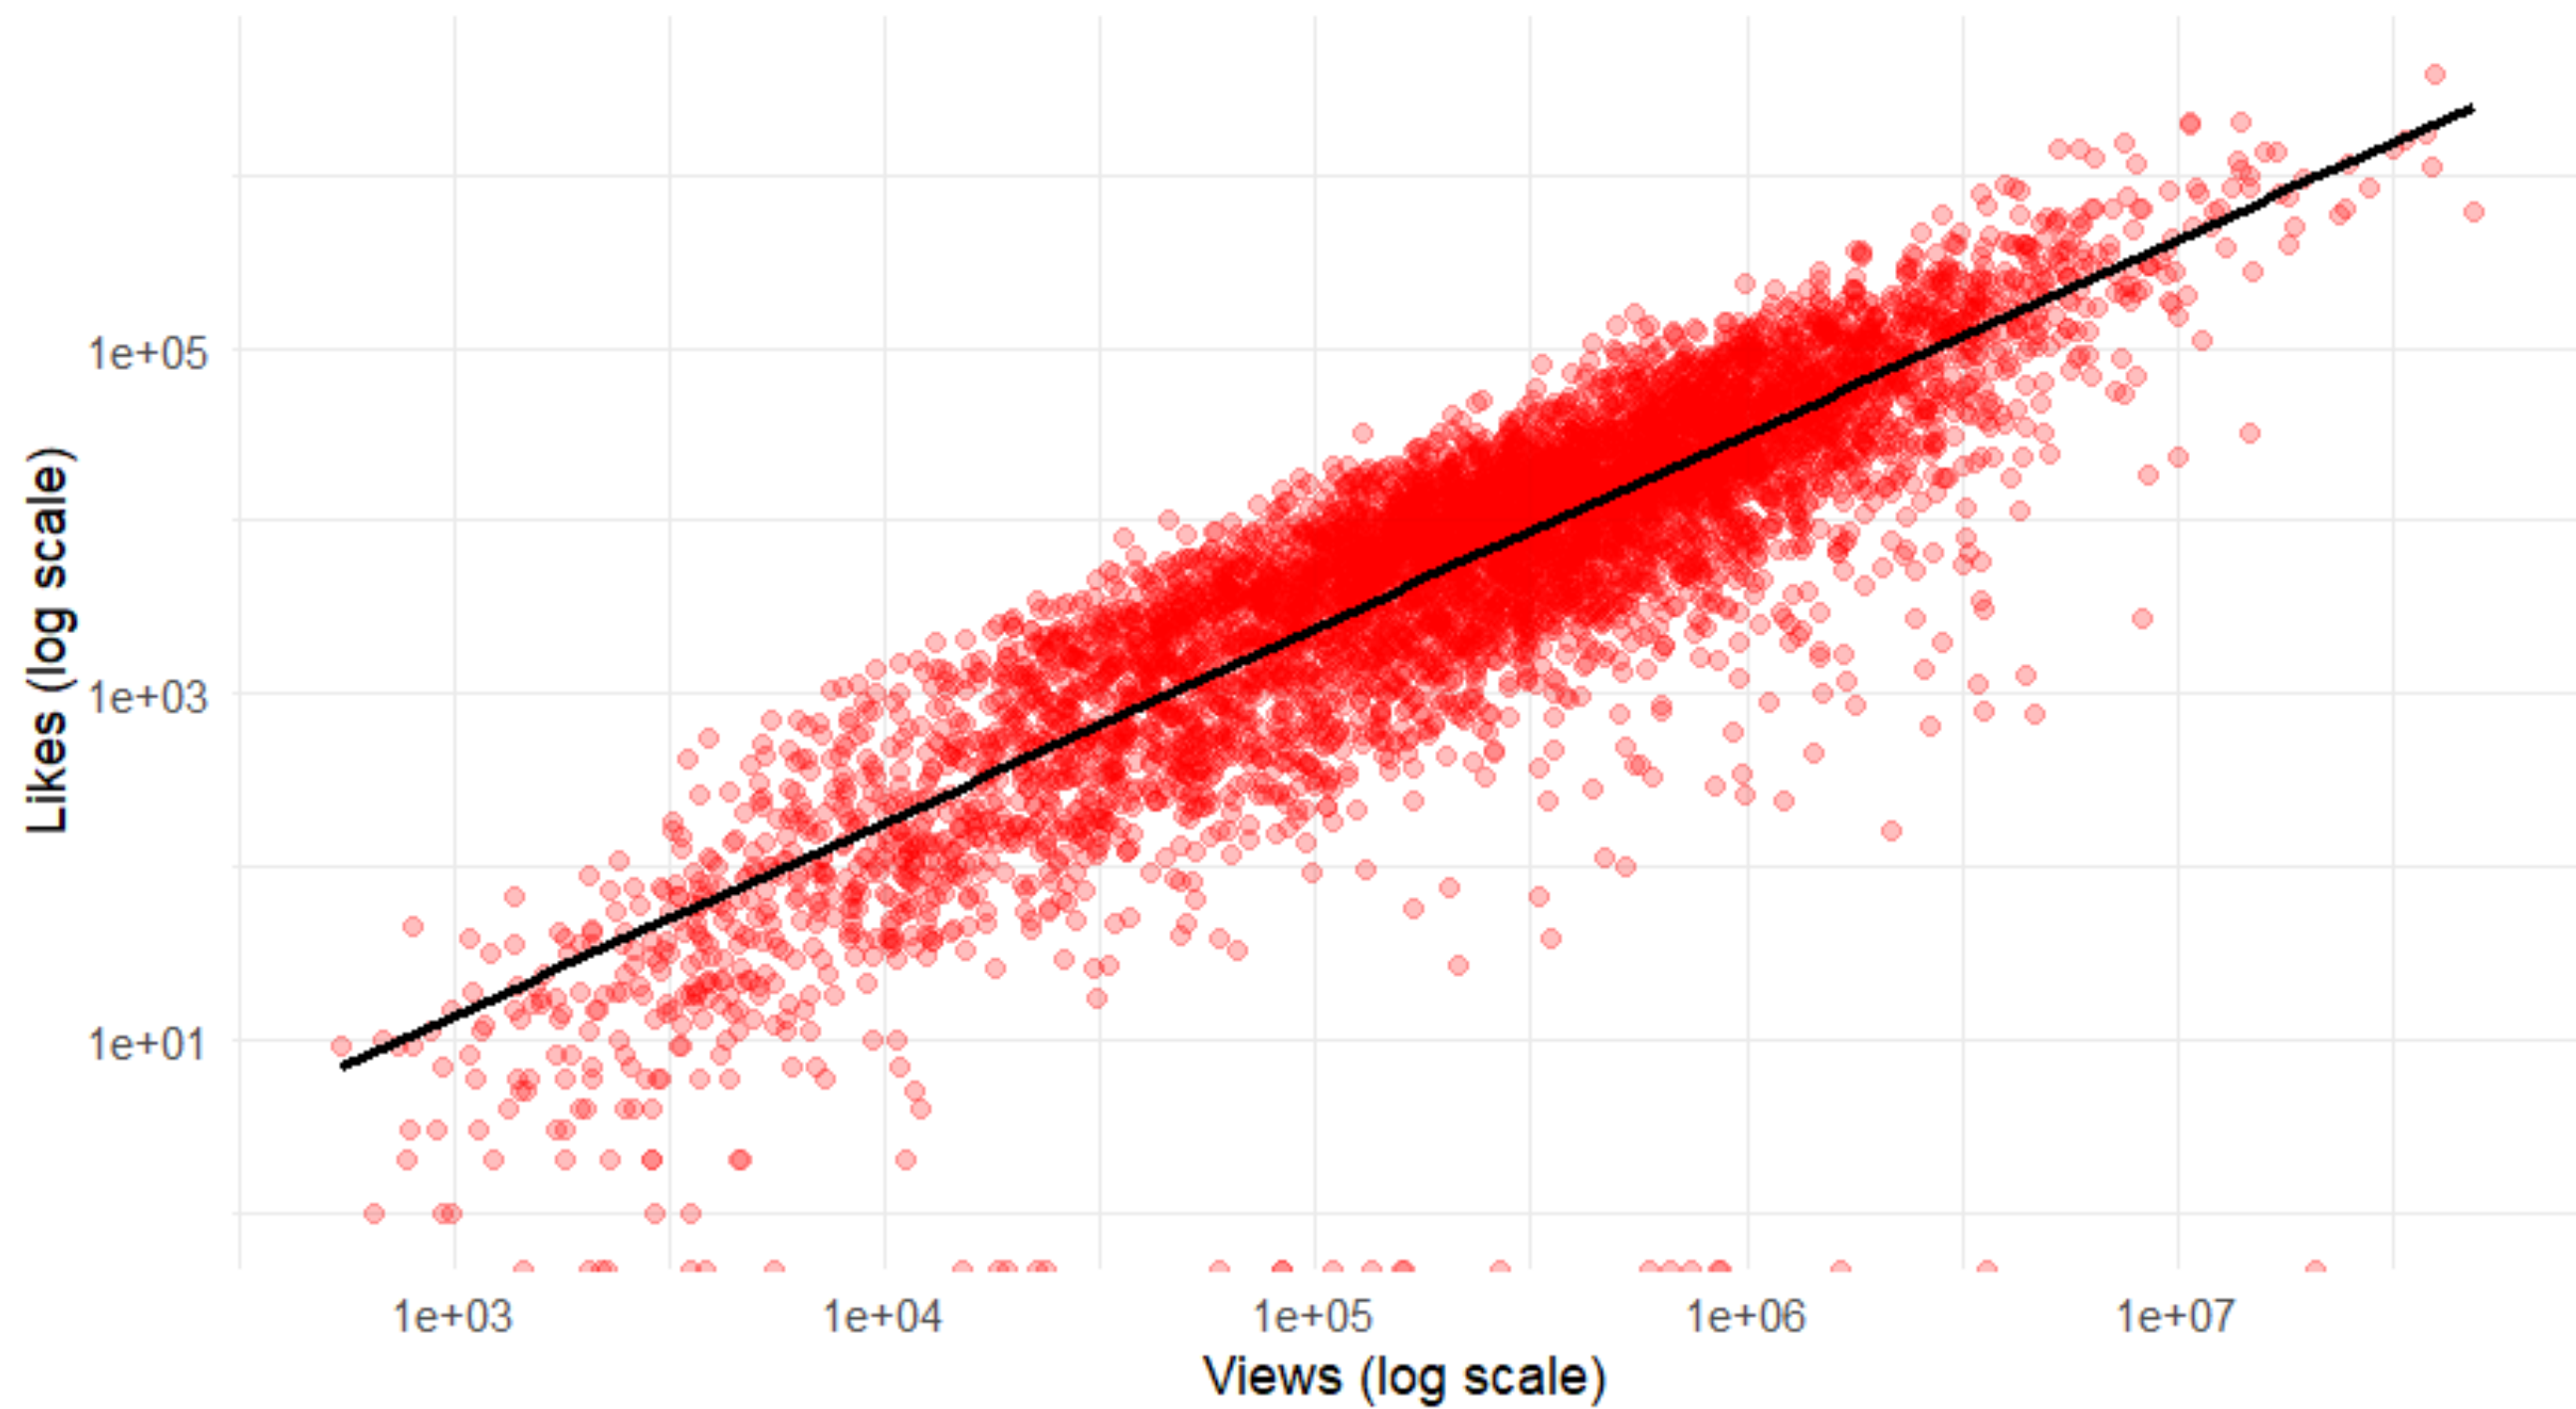

This chart shows what time of day trending videos were published. Most uploads occur during the afternoon and evening, when audience engagement is likely highest.

View counts vary widely across categories, with Music, Entertainment, and Comedy showing much higher engagement than others.

Views vs Likes (Log-Log Scale)

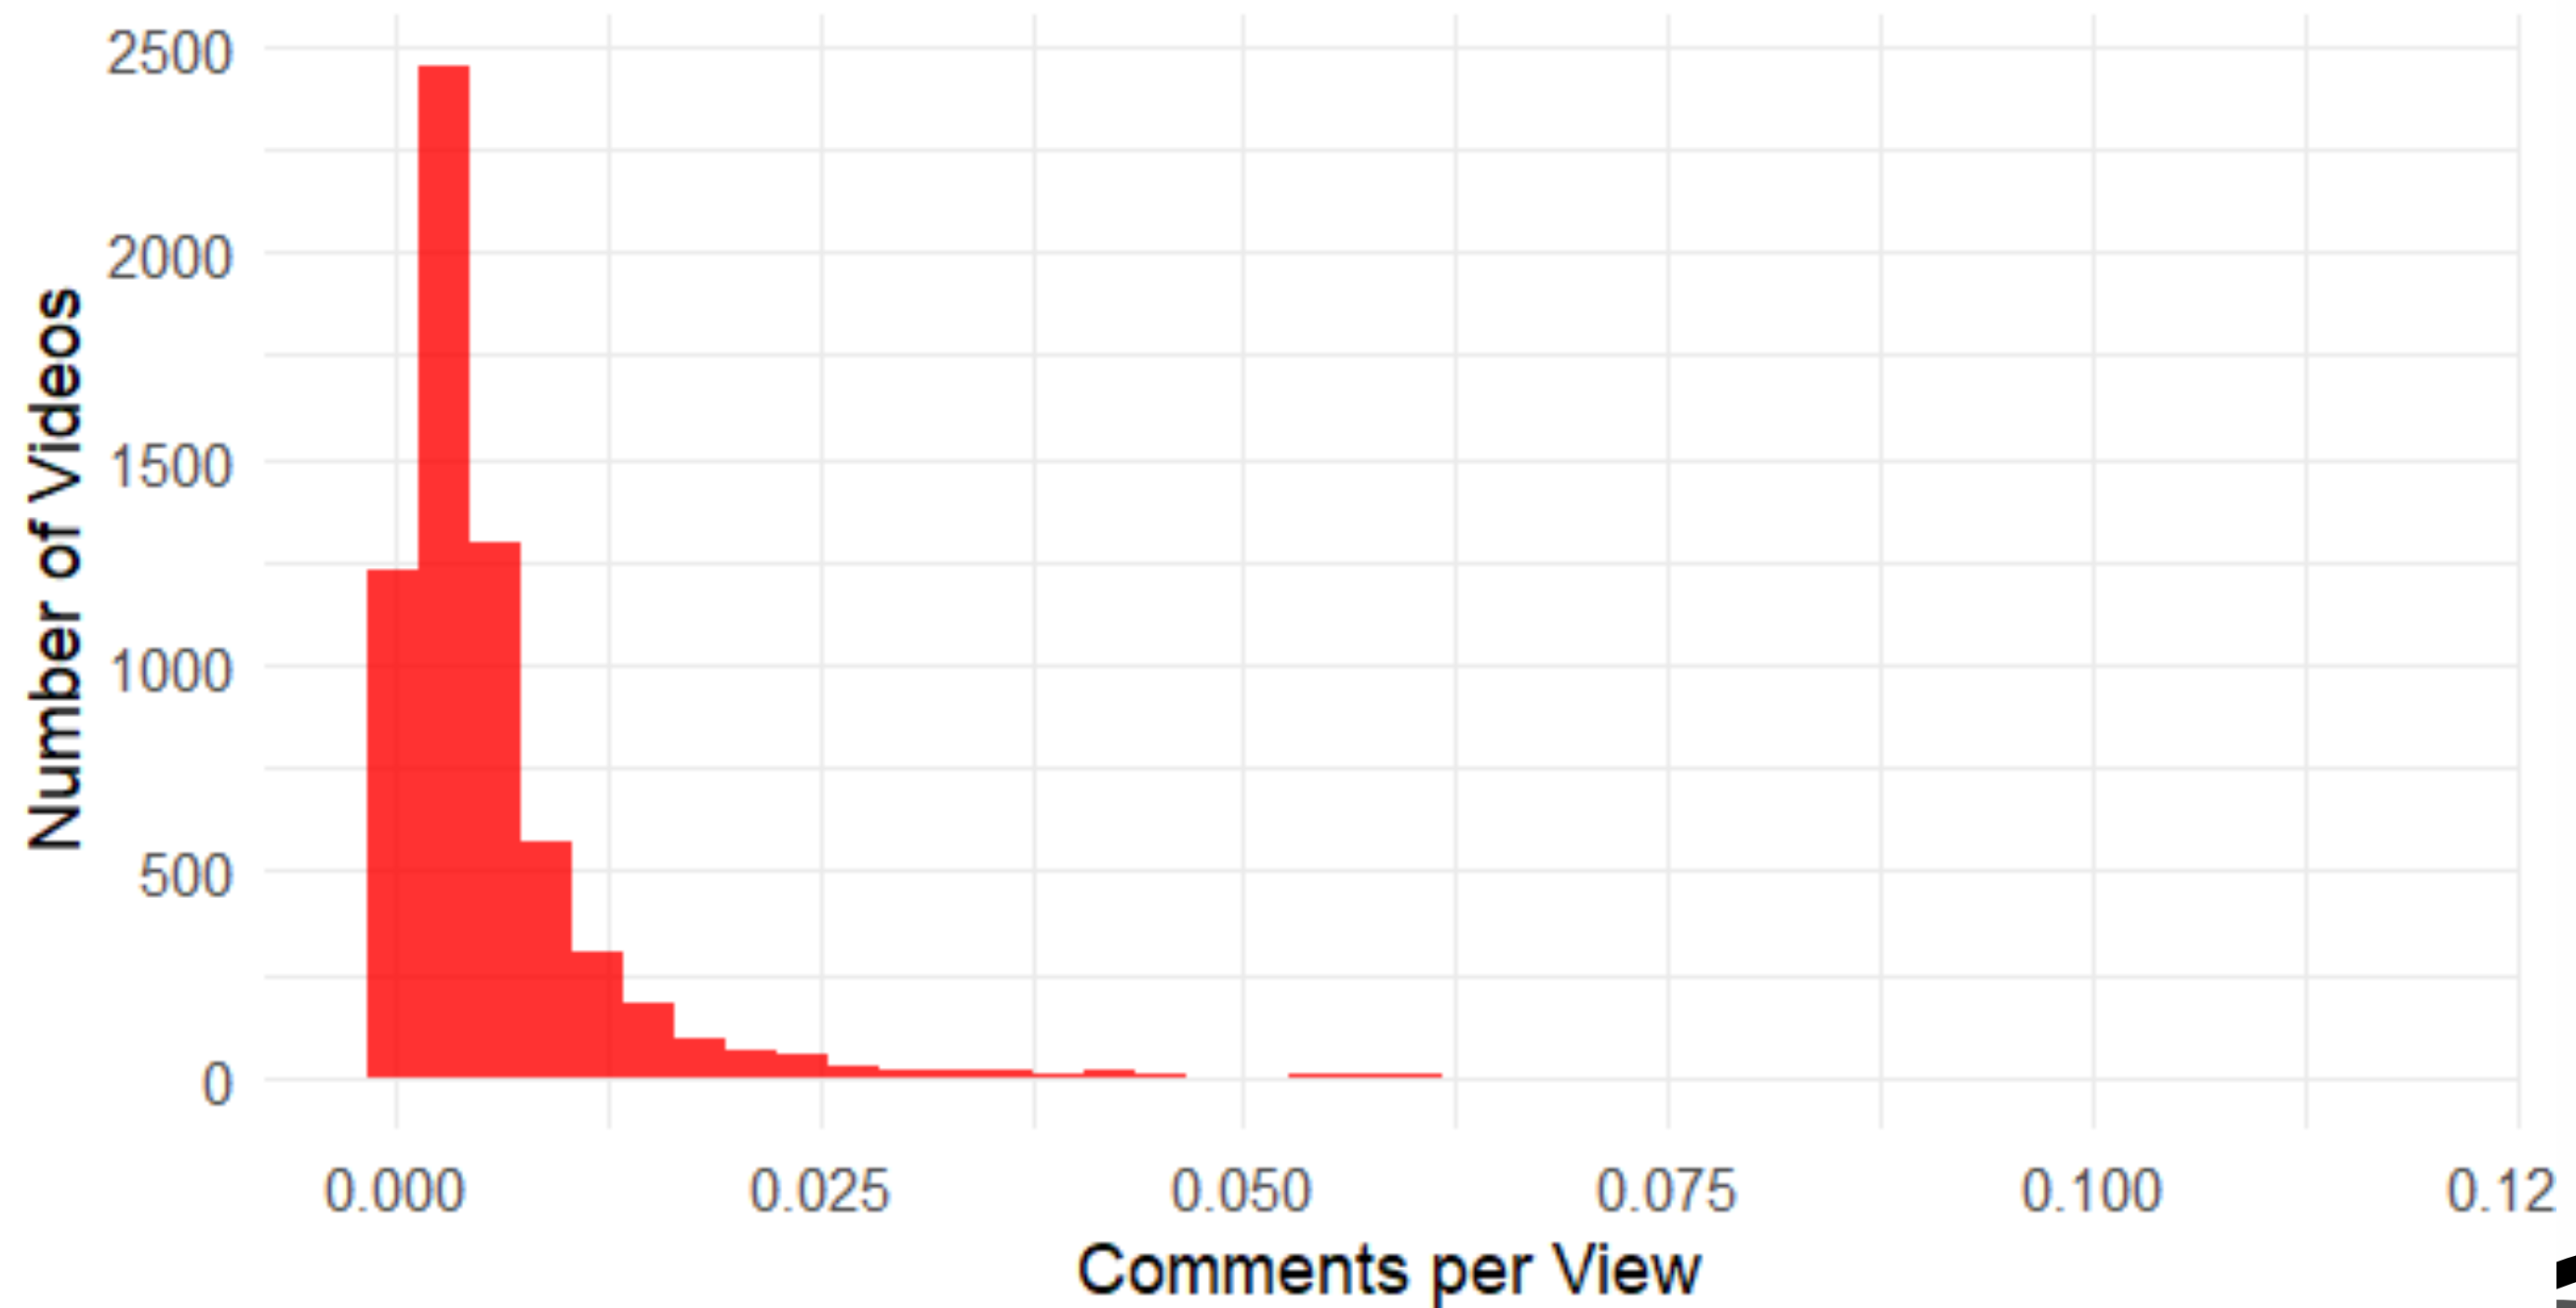

Does popularity = appreciation?

Videos with higher view counts consistently receive more likes, showing a strong upward engagement pattern.

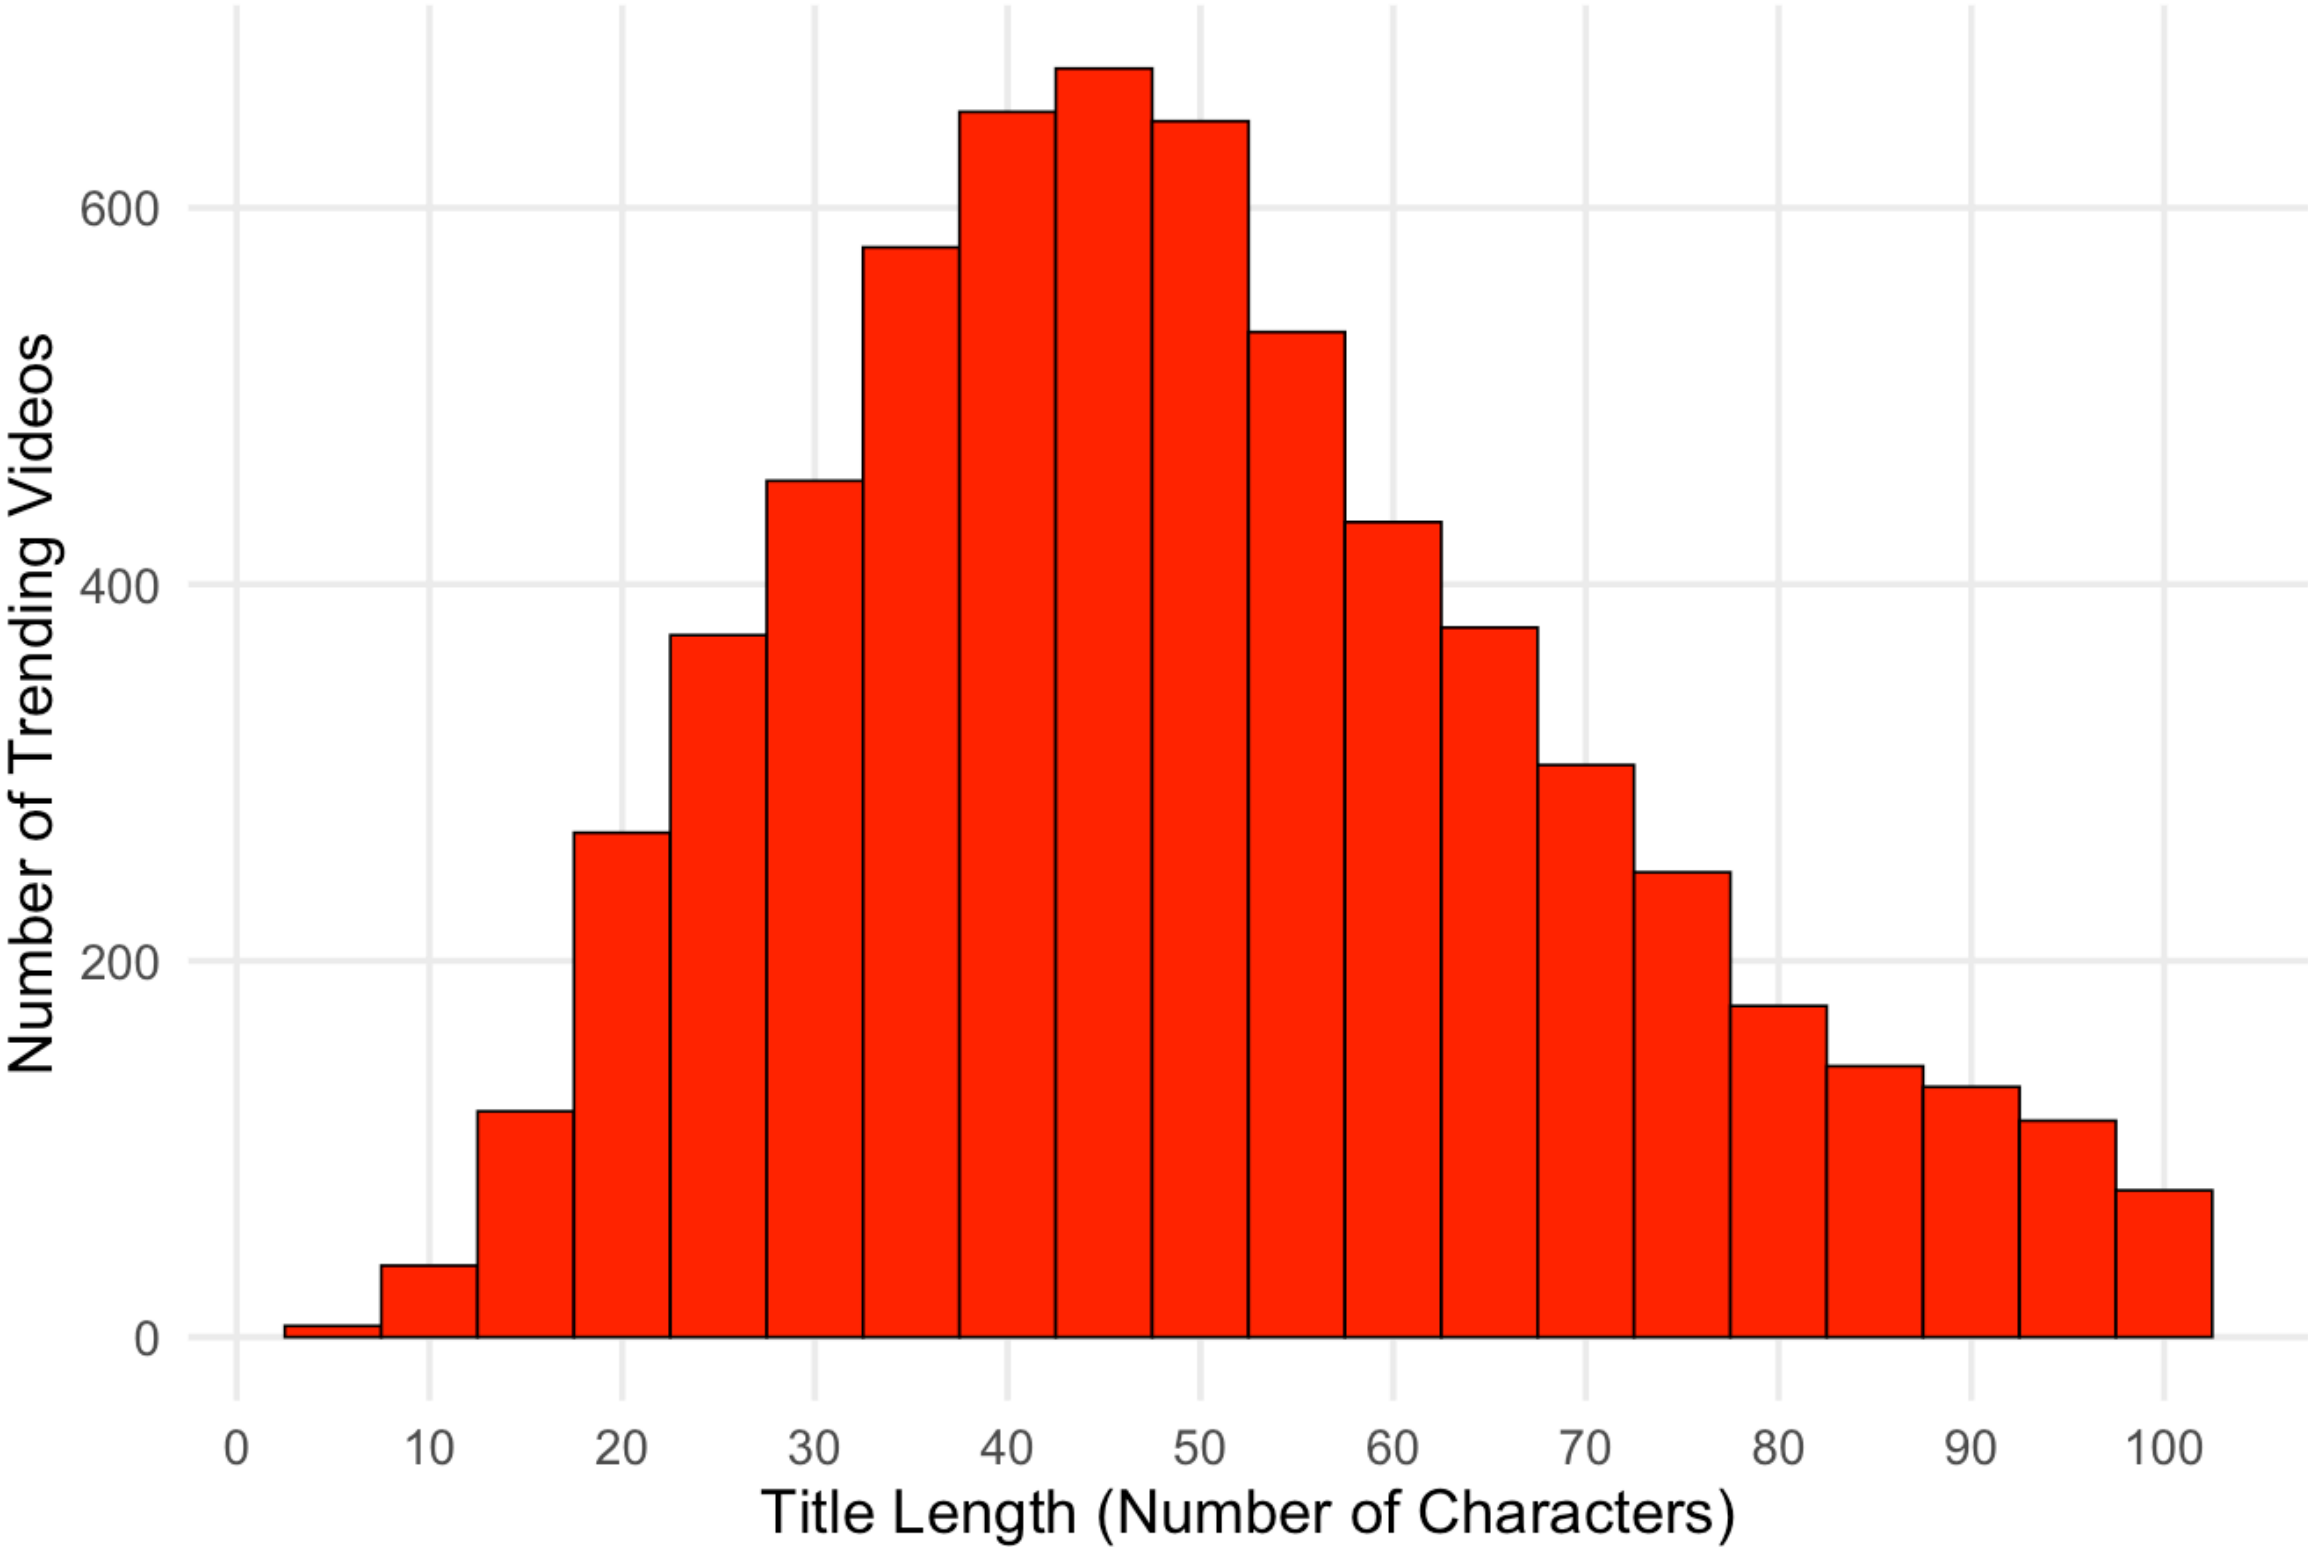

Distribution of Comment Rates

How much discussion each view generates

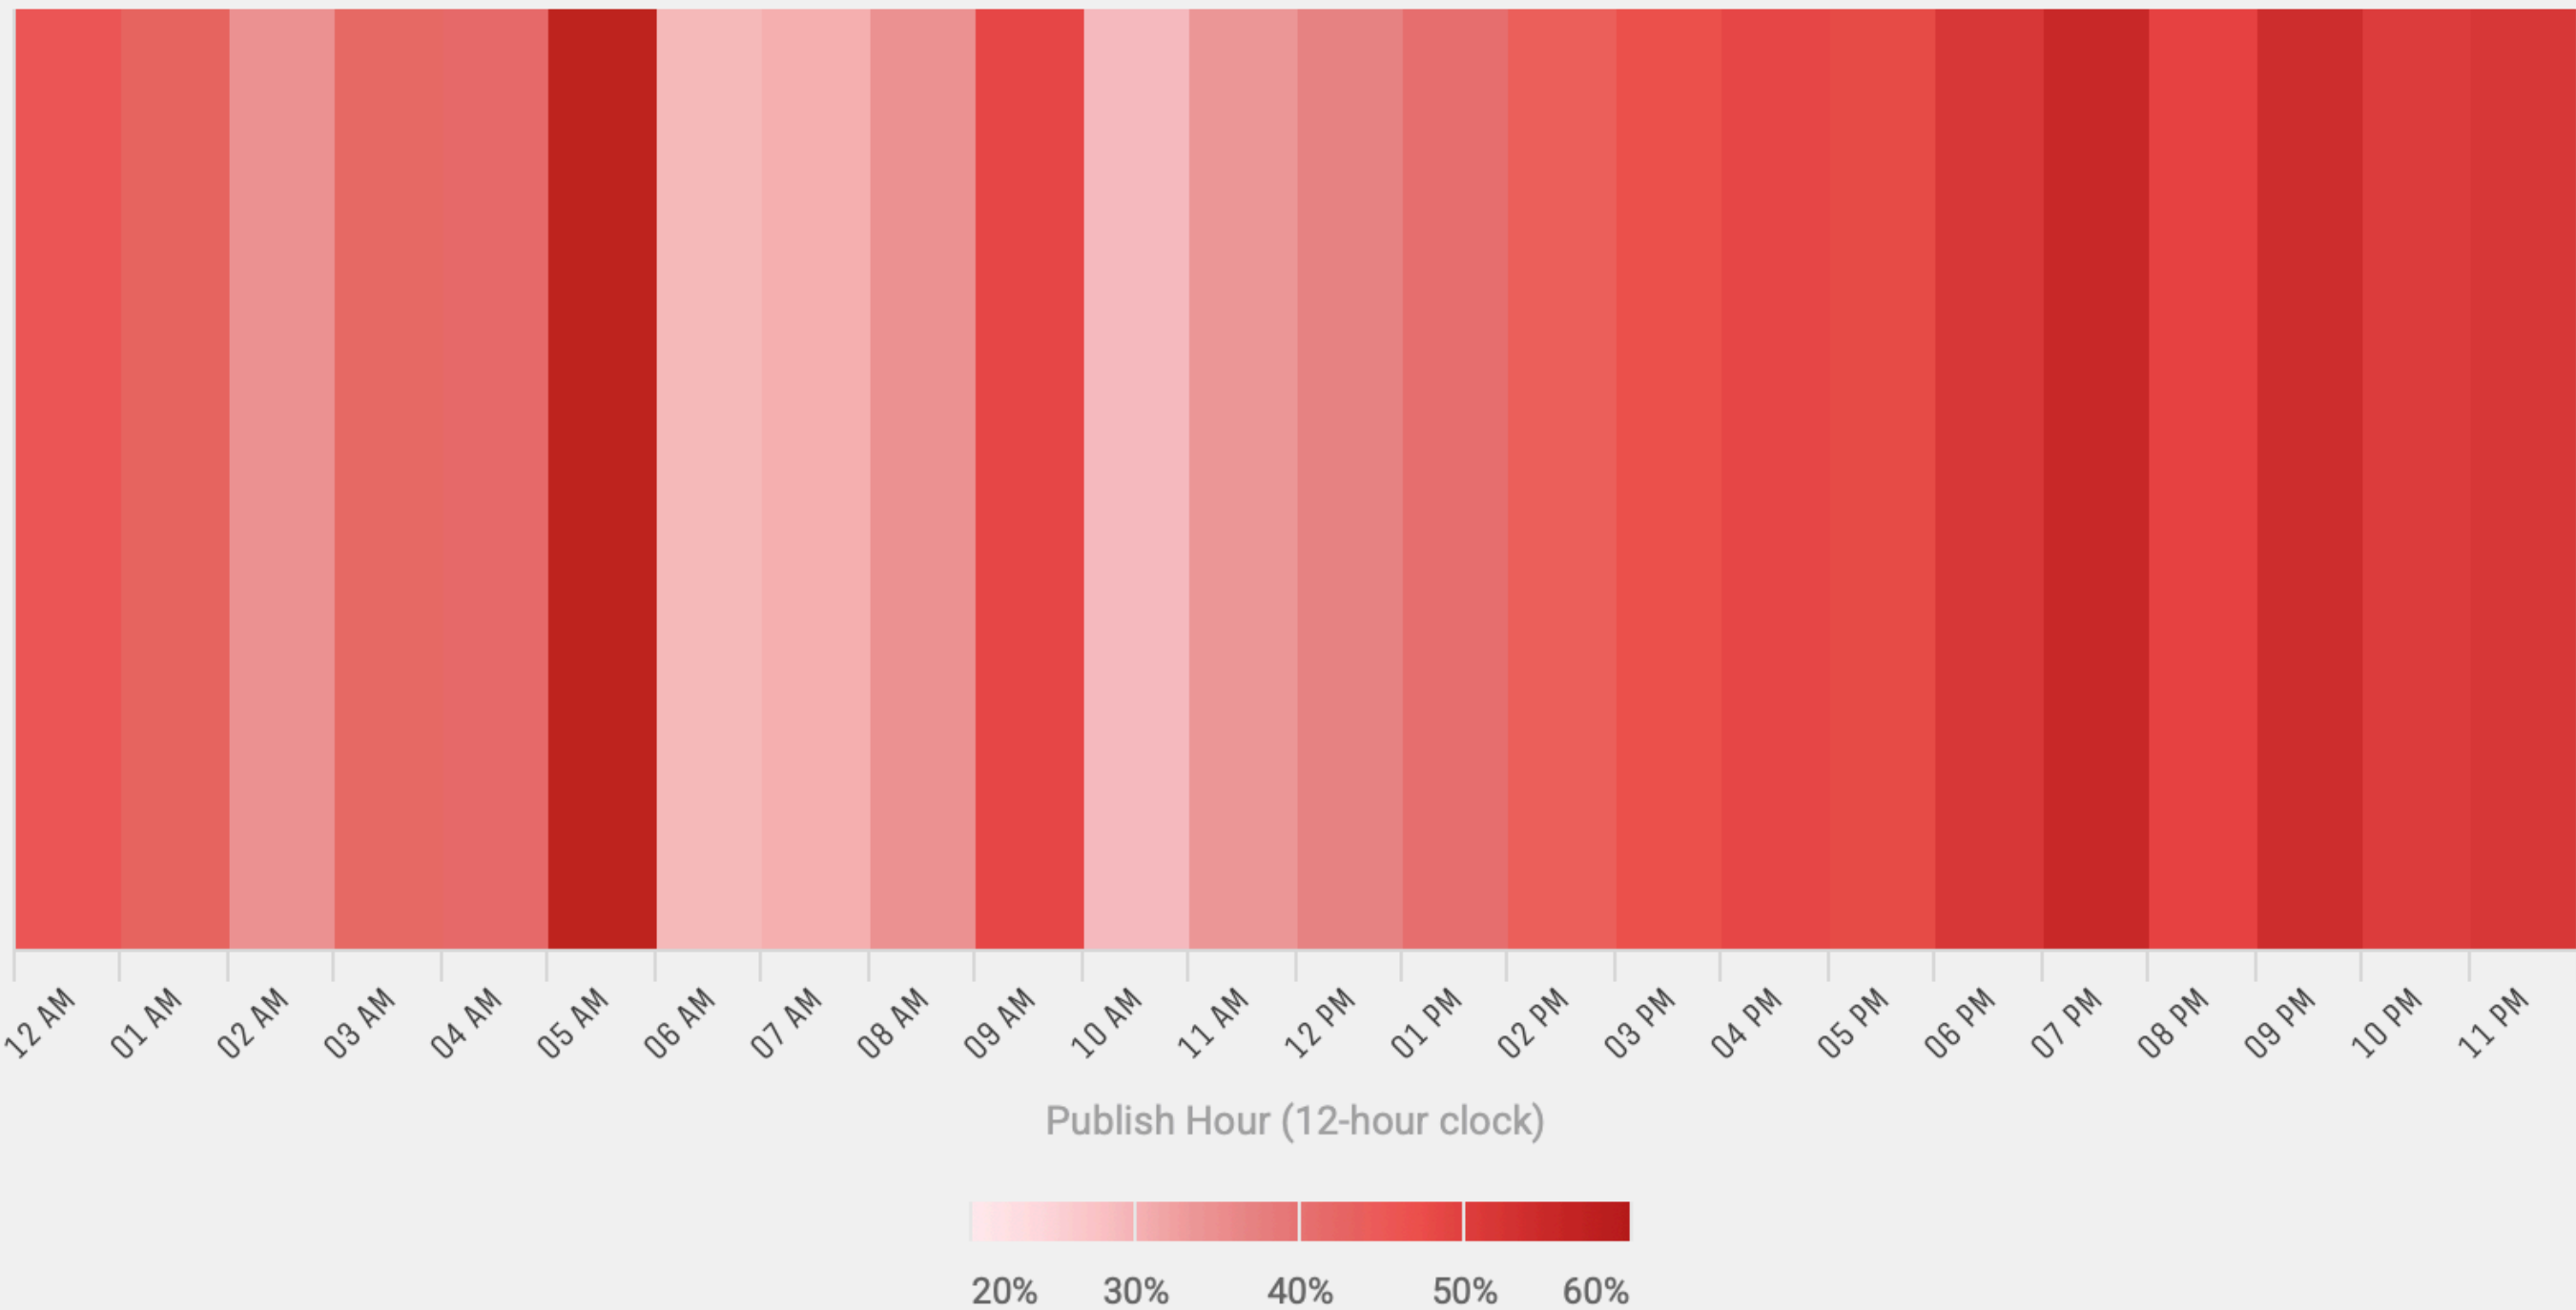

Most trending videos receive very few comments relative to their view counts, indicating that audience engagement is typically passive.

Distribution of YouTube Trending Video Title Lengths

Trending videos tend to use medium-length titles, with most falling between 20–60 characters.

🔥 Average Engagement Rate by Publish Hour

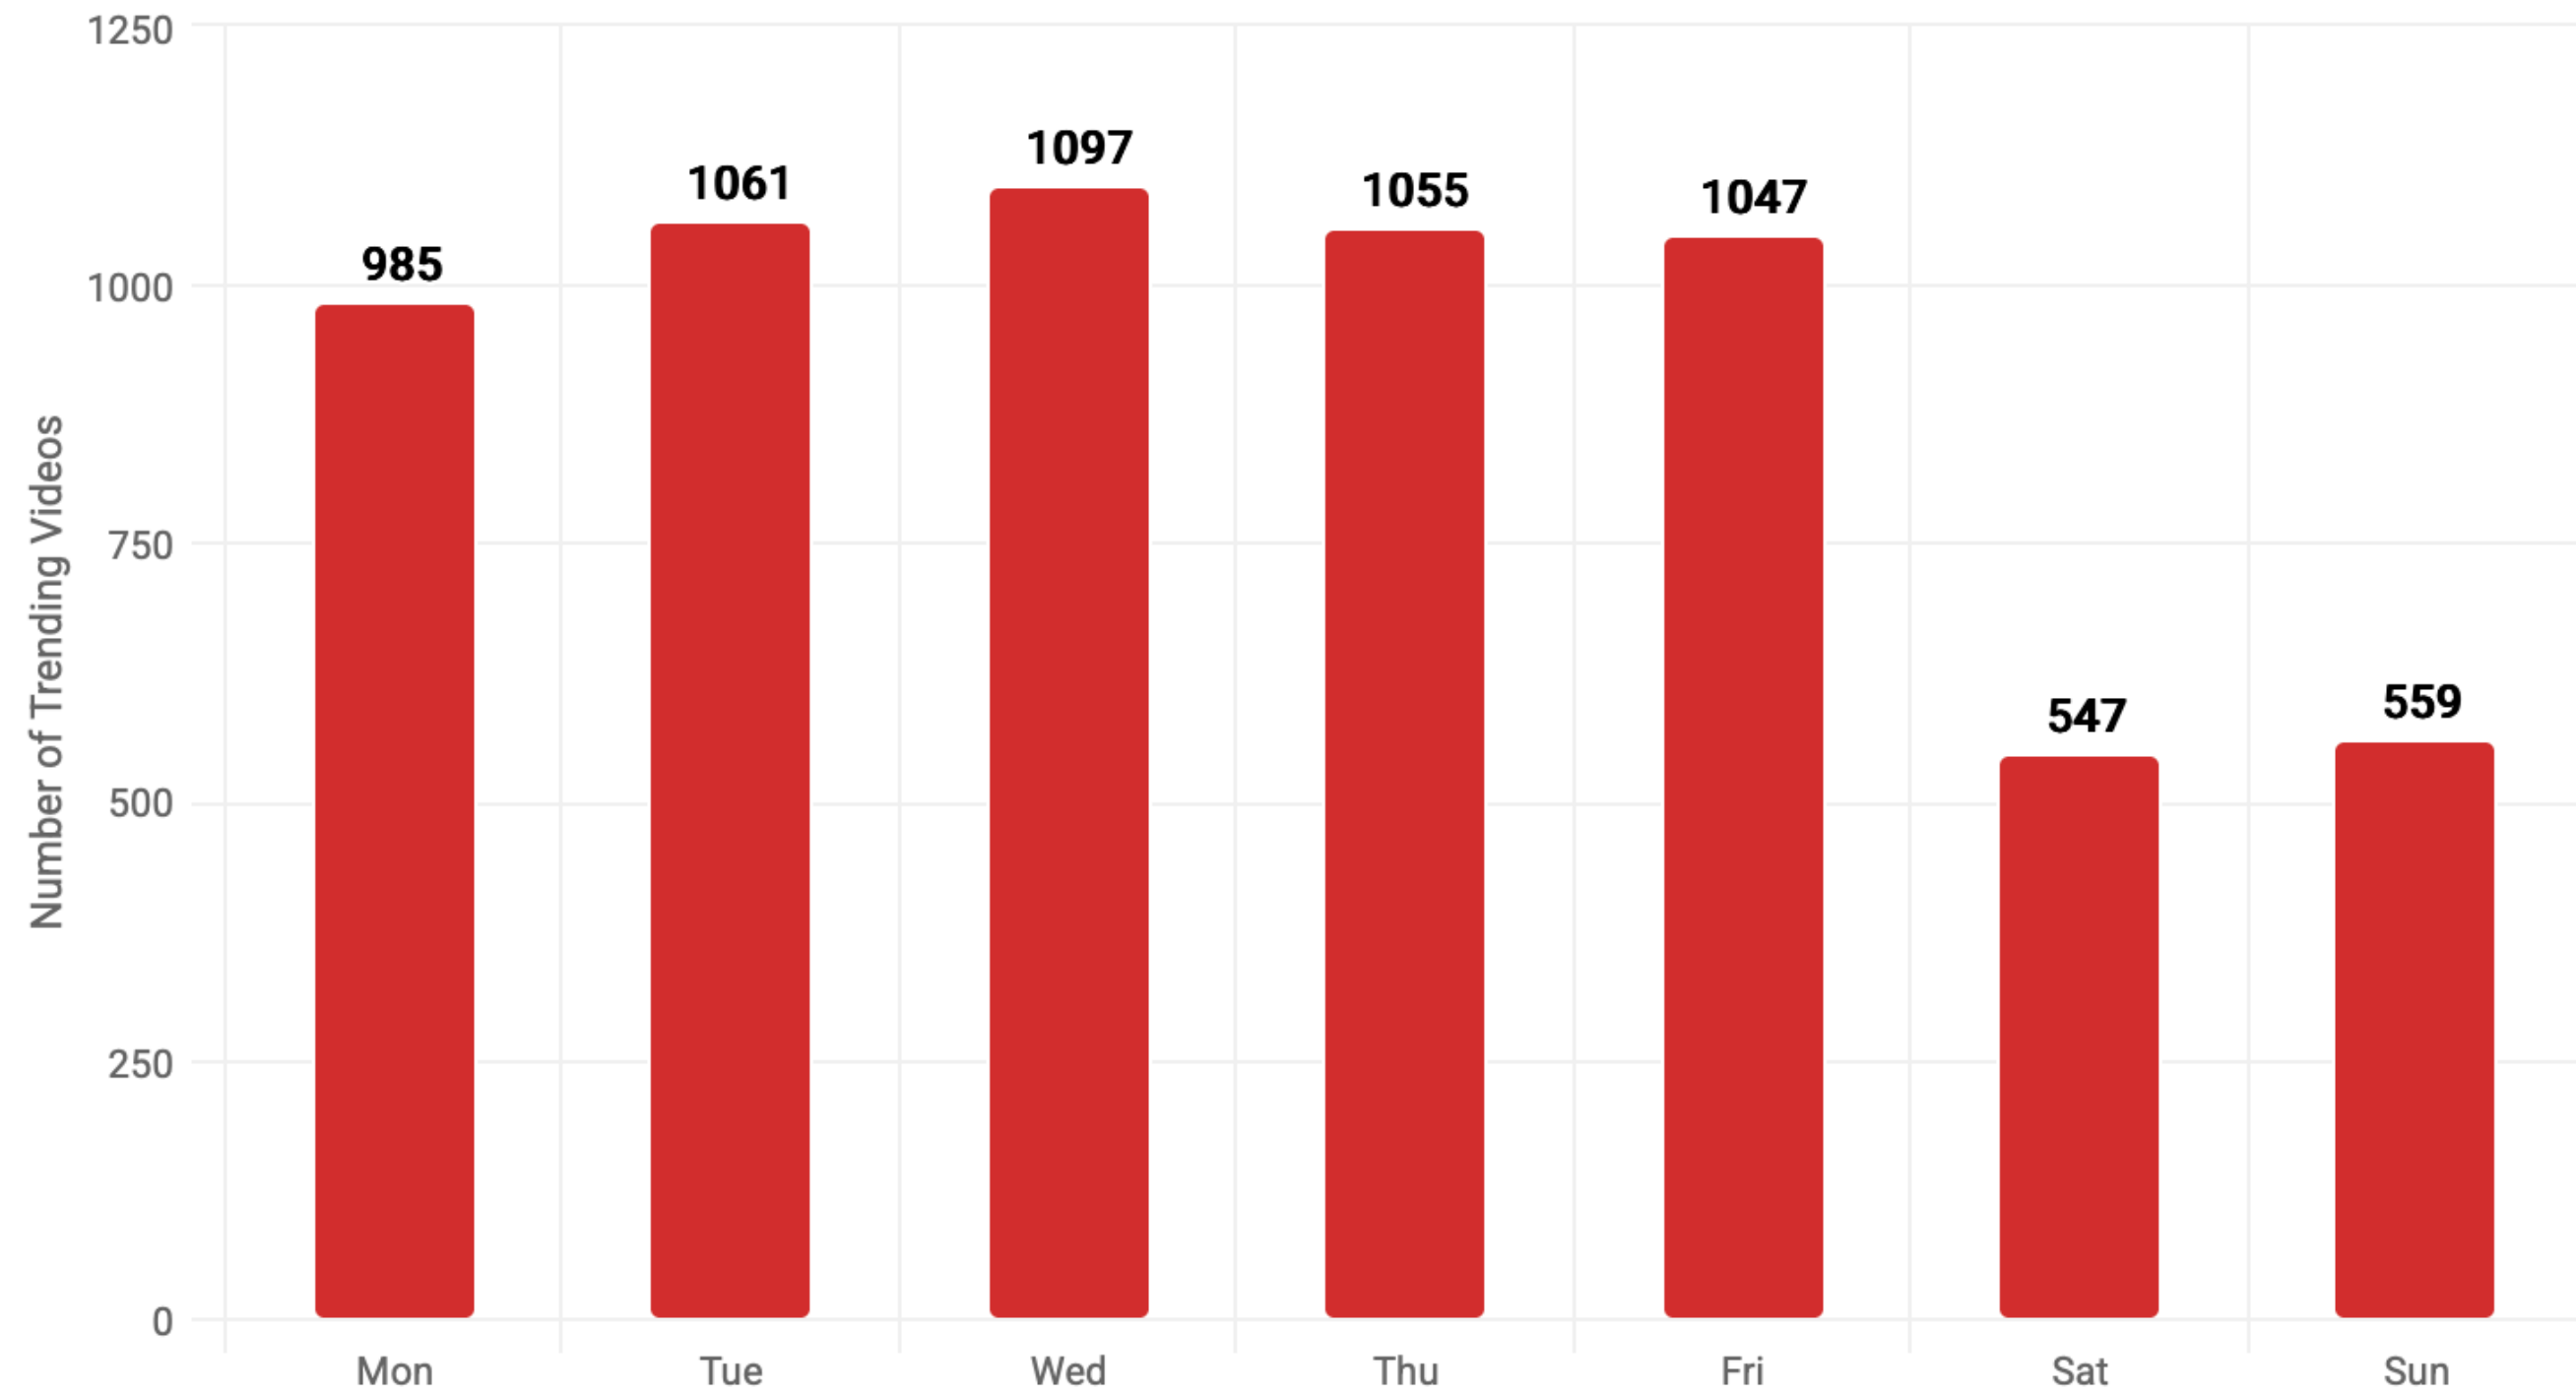

Engagement is highest during the evening hours, with a clear peak between 5 PM and 9 PM.

Trending Video Publishing Patterns by Weekday

Which days have the strongest visibility signal?

Trending uploads occur far more often on weekdays, especially mid-week.

Conclusion

Our findings suggest that:

- Entertainment and music content rise to the top most often
- A small number of creators account for a large share of trending videos
- Monthly trending activity shifts over time rather than remaining stable
- Upload timing appears to play a role in visibility, with peaks later in the day

In short: What trends is not random, it reflects audience attention and posting strategy.
